**DETAILED ACTION**

***Election/Restrictions***

Claim 4 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 8.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over W. E. Levine (U. S. Pat. 3,184,622).

W. E. Levine discloses an electromagnetic actuator (figure 8), comprising:

at least one electromagnet (90) having a coil and a first contact surface (112);  
a second contact surface (110);

at least one resetting device (104);

an armature (100) having a shank (102) mechanically coupled to said resetting device (104), said armature (100) being movable between said first contact surface (112) on said electromagnet (90) and said second contact surface (110); and

a connector (figure 9) having at least one contact element (110) electro-conductively connected to said coil of said electromagnet (90) and disposed such that

Art Unit: 2834

said contact element (110) can be electrically contacted by an assembly contacting element (122).

W. E. Levine discloses that said connector (figure 9) has an opening (120) formed therein, and said contact element (110) has a region configured as a service contact (122,124,126) which is led through said opening (120) in said connector (figure 9) and said service contact (124,126) can be electrically contacted by the assembly contacting element (122).

W. E. Levine discloses that said connector (figure 9) has a housing (114) with said opening (120) formed therein, said service contact (122,124,126) is led in an oil-proof manner through said opening (120) in said housing (114) of said connector (figure 9).

However, W. E. Levine does not disclose that the said contact element can be electrically contacted by an assembly contacting element at least during an assembly of the actuator onto a support. W. E. Levine does not disclose that the service contact can be electrically contacted by the assembly contacting element at least during the assembly of the actuator onto the support.

Referring to claims 1-2, no patentable weight has been given to the method of manufacturing limitations (i. e. "electrically contacted by an assembly contacting element at least during an assembly of the actuator onto a support") since "even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the

Art Unit: 2834

same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985)
